

BOARD CLICK

Introduction:

Board Click is a growing start-up from Hong Kong Cyberport aiming to create an AI-driven software for the digital outdoor advertising industry. We are a team with diverse backgrounds from investment banking, marketing, and AI who are ambitious to revolutionize this century-old business. We are excited to expand our team and look for a full-stack software engineer intern to join us and embark on this challenging journey!

Role Description:

As a full-stack software engineer, you will be working closely with the founder and business development manager on prototyping and developing the web application. You will be responsible to:

1. Develop a web-based application using React JS for front end and Python Django for back-end
2. Set up the architecture of a cloud-based environment such as MongoDB on AWS
3. Migration of current cloud server to AWS environment

Tech Qualification:

- Year 3 above in Computer Science, Software Engineering or similar disciplines
- Experienced in conducting technology research/analysis and laying out technical specifications
- Experienced front-end development
- Experienced in full-stack web application development using React.js and Python
- Knowledge of relational database such as MySQL/PostgreSQL

Soft Qualification:

- Team player with strong communication skills
- Self-initiator with strong problem-solving skills
- Love challenges/new ideas and ready to learn/break/make new things

Benefit:

- Compensation/Stipend subject to qualifications and discussions
- Fun, flexible and collaborative work environment
- Mentorship from industry-leading experts
